

## Structure related problems (Total # questions)

No.	Problem statement	Difficulty level														
1	Declare a structure of students with three member variables (name, id and cgpa), where name is a string and id are strings, and cgpa is a float value.	*														
2	Declare a structure of students with three member variables (name, id and cgpa), where name is a string and id are strings, and cgpa is a float value with <b>default values</b> .	*														
3	Given a structure <b>student</b> , which has three member variables (name, id and cgpa), declare a variable of structure <b>student</b> .	*														
4	Given a structure <b>student</b> , which has three member variables (name, id and cgpa), declare a variable of structure <b>student</b> . Display the value of the member variables.	*														
5	Given a structure <b>student</b> , which has three member variables (name, id and cgpa), declare a variable of structure <b>student</b> . Assign values to the member variables.	*														
6	Given a structure <b>student</b> , which has three member variables (name, id and cgpa), declare a variable of structure <b>student</b> . Populate the member variables from the keyboard.	*														
7	<div>Declare a structure of students with three variables (name, id and cgpa). Take information of two students as input and show the output.</div> <table><tr><th>Sample Input</th><th>Sample Output</th></tr><tr><td>Shakib Al Hasan</td><td>Shakib Al Hasan</td></tr><tr><td>101</td><td>101</td></tr><tr><td>3.5</td><td>3.5</td></tr><tr><td>Tamim Iqbal</td><td>Tamim Iqbal</td></tr><tr><td>102</td><td>102</td></tr><tr><td>2.7</td><td>2.7</td></tr></table>	Sample Input	Sample Output	Shakib Al Hasan	Shakib Al Hasan	101	101	3.5	3.5	Tamim Iqbal	Tamim Iqbal	102	102	2.7	2.7	*
Sample Input	Sample Output															
Shakib Al Hasan	Shakib Al Hasan															
101	101															
3.5	3.5															
Tamim Iqbal	Tamim Iqbal															
102	102															
2.7	2.7															

8	<p>Declare a structure of students with three variables (name, id and cgpa). Now take the input of two students and print the information of that student who has the higher cgpa.</p> <table><tr><th>Sample Input</th><th>Sample Output</th></tr><tr><td>Shakib Al Hasan</td><td>Shakib Al Hasan</td></tr><tr><td>101</td><td>101</td></tr><tr><td>3.5</td><td>3.5</td></tr><tr><td>Tamim Iqbal</td><td></td></tr><tr><td>102</td><td></td></tr><tr><td>2.7</td><td></td></tr></table>	Sample Input	Sample Output	Shakib Al Hasan	Shakib Al Hasan	101	101	3.5	3.5	Tamim Iqbal		102		2.7		*
Sample Input	Sample Output															
Shakib Al Hasan	Shakib Al Hasan															
101	101															
3.5	3.5															
Tamim Iqbal																
102																
2.7																
9	<p>Declare a structure of students with three variables (name, id and cgpa). Now take the input of two students and print the information of that student who has better cgpa with a function.</p> <table><tr><th>Sample Input</th><th>Sample Output</th></tr><tr><td>Shakib Al Hasan</td><td>Shakib Al Hasan</td></tr><tr><td>101</td><td>101</td></tr><tr><td>3.5</td><td>3.5</td></tr><tr><td>Tamim Iqbal</td><td></td></tr><tr><td>102</td><td></td></tr><tr><td>2.7</td><td></td></tr></table>	Sample Input	Sample Output	Shakib Al Hasan	Shakib Al Hasan	101	101	3.5	3.5	Tamim Iqbal		102		2.7		**
Sample Input	Sample Output															
Shakib Al Hasan	Shakib Al Hasan															
101	101															
3.5	3.5															
Tamim Iqbal																
102																
2.7																
10	<p>You have to declare a structure named triangle. triangle_id, base and height are the members of this structure. Now you will have to take input of three triangles and find out the area of each triangle.</p> <p>[Triangle Area = (base*height)/2]</p>	*														

	<table><tr><th>Sample Input</th><th>Sample Output</th></tr><tr><td>1</td><td>Area of 1 = 20</td></tr><tr><td>5</td><td>Area of 2 = 12</td></tr><tr><td>8</td><td>Area of 3 = 6</td></tr><tr><td>2</td><td></td></tr><tr><td>4</td><td></td></tr><tr><td>6</td><td></td></tr><tr><td>3</td><td></td></tr><tr><td>3</td><td></td></tr><tr><td>4</td><td></td></tr></table>	Sample Input	Sample Output	1	Area of 1 = 20	5	Area of 2 = 12	8	Area of 3 = 6	2		4		6		3		3		4		
Sample Input	Sample Output																					
1	Area of 1 = 20																					
5	Area of 2 = 12																					
8	Area of 3 = 6

12

The Tigers have clinched a stunning victory over their rivals recently. In that series of three matches, some players put up some amazing performances. Now you have to create a structure named player where you have to store the following information of each player:

\*\*

1. Player's name
2. Player's country
3. Array(size 3) to store runs of 3 matches
4. Array(size 3) to store wickets of 3 matches
5. Array(size 3) to store points of 3 matches

Count points using the following formula:

1. Each wicket = 12 points
2. Runs  $\leq 25$  in a match = 5 points
3.  $25 < \text{Runs} \leq 50$  in a match = 10 points
4.  $50 < \text{Runs} \leq 75$  in a match = 15 points
5.  $75 < \text{Runs}$  in a match = 20 points

Now, take input of two players and calculate the points for each player for all the three matches.

Sample Input	Sample Output
--------------	---------------

	<div><div><div>Shakib Al Hasan</div><div>Bangladesh</div><div>20</div><div>75</div><div>103</div><div>1</div><div>1</div><div>5</div><div>Tamim Iqbal</div><div>Bangladesh</div><div>100</div><div>109</div><div>17</div><div>0</div><div>0</div><div>0</div></div><div><div>Match 1:</div><div>Shakib Al Hasan points: 17</div><div>Tamim Iqbal points: 20</div><div>Match 2:</div><div>Shakib Al Hasan points: 27</div><div>Tamim Iqbal points: 20</div><div>Match 3:</div><div>Shakib Al Hasan points: 80</div><div>Tamim Iqbal points: 5</div></div></div>

The Tigers have clinched a stunning victory over their rivals recently. In that series of three matches, some players put up some amazing performances. Now you have to create a structure named player where you have to store the following information of each player:

1. Player's name
2. Player's country
3. Array(size 3) to store runs of 3 matches
4. Array(size 3) to store wickets of 3 matches
5. Array(size 3) to store points of 3 matches

Count points using the following formula:

1. Each wicket = 12 points
2. Runs  $\leq 25$  in a match = 5 points
3.  $25 < \text{Runs} \leq 50$  in a match = 10 points
4.  $50 < \text{Runs} \leq 75$  in a match = 15 points
5.  $75 < \text{Runs}$  in a match = 20 points

Now, take input of two players and calculate the points for each player for all the three matches. And also find man of the match(MOM) for each match based on their points and find out the man of the series on more points overall.
