## **Basic Introductory Problems**

## (Total 15 questions)

1. Program that will print "Hello World".  Sample input  Sample output Hello World  2. Program that will use newline/tab and print the following segment:  Sample input  Sample output Hello World. This is my first program. C is fun.  3. Program that will print the following segment:  Sample input  Sample output The question is - "How to write a \ comment/ in C programming language?"  4. Program that will declare an integer, a floating point number, a character. Then it will initialize them with values and print those values.  Sample input  Sample output The integer value: 5 The floating point value: 3.141593 The character value: a The integer value: 100 The floating point value: 1.618000 The character value: 2  5. Program that will do the followings: a) Declare a variable uninitialize do b) Declare and initialize multiple variables with different values in one statement d) Declare and initialize multiple variables with different value in one statement d) Declare and initialize multiple variables with different value in one statement d) Declare and initialize multiple variables with the same value in one statement	SL	Problem	n statement	Difficulty
Sample input  Sample output Hello World  *  Sample input  Sample output Hello World. This is my first program. C is fun.  *  Sample input  Sample output Hello World. This is my first program. C is fun.  *  Sample input  Sample output The question is - "How to write a \ comment/ in C programming language?"  *  4. Program that will declare an integer, a floating point number, a character. Then it will initialize them with values and print those values.  Sample input  Sample output The integer value: 5 The floating point value: 3.141593 The character value: a The integer value: 100 The floating point value: 1.618000 The character value: z  *  Program that will do the followings: a) Declare a variable uninitialized b) Declare and initialize a variable in one statement c) Declare and initialize multiple variables with different values in one statement	1	Program that will print "Hello World"		
# * * * * * * * * * * * * * * * * * * *		Program that will print hello world.		
2. Program that will use newline/tab and print the following segment:  Sample input  Bello World. This is my first program. C is fun.  *  Sample input  Sample output  The question is - "How to write a \ comment/ in C programming language?"  4. Program that will declare an integer, a floating point number, a character. Then it will initialize them with values and print those values.  Sample input  Sample output  The integer value: 5 The floating point value: 3.141593 The character value: a The integer value: 100 The floating point value: 1.618000 The character value: z  *  5. Program that will do the followings: a) Declare a variable uninitialized b) Declare and initialize a variable in one statement c) Declare and initialize multiple variables with different values in one statement		Sample input	Sample output	
Sample input  Sample output  Hello World. This is my first program. C is fun.  *  Sample input  Sample output  The question is - "How to write a \ comment/ in C programming language?"  *  4. Program that will declare an integer, a floating point number, a character. Then it will initialize them with values and print those values.  Sample input  Sample output  The integer value: 5 The floating point value: 3.141593 The character value: a The integer value: 100 The floating point value: 1.618000 The character value: z  *  Program that will do the followings:  a) Declare a variable uninitialized b) Declare and initialize a variable in one statement c) Declare and initialize multiple variables with different values in one statement			Hello World	
Sample input  Sample output  Hello World. This is my first program. C is fun.  *  Sample input  Sample output  The question is - "How to write a \ comment/ in C programming language?"  *  4. Program that will declare an integer, a floating point number, a character. Then it will initialize them with values and print those values.  Sample input  Sample output  The integer value: 5 The floating point value: 3.141593 The character value: a The integer value: 100 The floating point value: 1.618000 The character value: z  *  Program that will do the followings:  a) Declare a variable uninitialized b) Declare and initialize a variable in one statement c) Declare and initialize multiple variables with different values in one statement				
Sample input    Sample output   Hello World.   This is my first program.   C is fun.		Dragram that will use newline /tab and print	the following cogment:	*
# Hello World. This is my first program. C is fun.  *  Sample input  Sample output  The question is - "How to write a \ comment/ in C programming language?"  *  Program that will declare an integer, a floating point number, a character. Then it will initialize them with values and print those values.  Sample input  Sample output  The integer value: 5 The floating point value: 3.141593 The character value: a The integer value: 100 The floating point value: 1.618000 The character value: z  *  Program that will do the followings: a) Declare a variable uninitialized b) Declare and initialize a variable in one statement c) Declare and initialize multiple variables with different values in one statement	۷.	Program that will use newline/tab and print the following segment:		
# Hello World. This is my first program. C is fun.  *  Sample input  Sample output  The question is - "How to write a \ comment/ in C programming language?"  *  Program that will declare an integer, a floating point number, a character. Then it will initialize them with values and print those values.  Sample input  Sample output  The integer value: 5 The floating point value: 3.141593 The character value: a The integer value: 100 The floating point value: 1.618000 The character value: z  *  Program that will do the followings: a) Declare a variable uninitialized b) Declare and initialize a variable in one statement c) Declare and initialize multiple variables with different values in one statement		Sample input	Sample output	
3. Program that will print the following segment:  Sample input  Sample output  The question is - "How to write a \ comment/ in C programming language?"  4. Program that will declare an integer, a floating point number, a character. Then it will initialize them with values and print those values.  Sample input  Sample output  The integer value: 5  The floating point value: 3.141593  The character value: a  The integer value: 100  The floating point value: 1.618000  The character value: z   5. Program that will do the followings:  a) Declare a variable uninitialized  b) Declare and initialize a variable in one statement  c) Declare and initialize multiple variables with different values in one statement			Hello World.	
Sample input  The question is - "How to write a \ comment/ in C programming language?"  4. Program that will declare an integer, a floating point number, a character. Then it will initialize them with values and print those values.  Sample input  Sample output  The integer value: 5  The floating point value: 3.141593  The character value: a  The integer value: 100  The floating point value: 1.618000  The character value: z   *  Program that will do the followings:  a) Declare a variable uninitialized  b) Declare and initialize a variable in one statement  c) Declare and initialize multiple variables with different values in one statement			This is my first program. C is fun.	
Sample input  The question is - "How to write a \ comment/ in C programming language?"  4. Program that will declare an integer, a floating point number, a character. Then it will initialize them with values and print those values.  Sample input  Sample output  The integer value: 5  The floating point value: 3.141593  The character value: a  The integer value: 100  The floating point value: 1.618000  The character value: z   *  Program that will do the followings:  a) Declare a variable uninitialized  b) Declare and initialize a variable in one statement  c) Declare and initialize multiple variables with different values in one statement				
Sample input  The question is - "How to write a \ comment/ in C programming language?"  4. Program that will declare an integer, a floating point number, a character. Then it will initialize them with values and print those values.  Sample input  Sample output  The integer value: 5  The floating point value: 3.141593  The character value: a  The integer value: 100  The floating point value: 1.618000  The character value: z   *  Program that will do the followings:  a) Declare a variable uninitialized  b) Declare and initialize a variable in one statement  c) Declare and initialize multiple variables with different values in one statement	2	Drogram that will print the following segmen	+•	*
The question is - "How to write a \ comment/ in C programming language?"  4. Program that will declare an integer, a floating point number, a character. Then it will initialize them with values and print those values.    Sample input   Sample output	э.	Program that will print the following segmen	it.	
The question is - "How to write a \ comment/ in C programming language?"  4. Program that will declare an integer, a floating point number, a character. Then it will initialize them with values and print those values.    Sample input   Sample output		Sample input	Sample output	
4. Program that will declare an integer, a floating point number, a character. Then it will initialize them with values and print those values.  Sample input  Sample output  The integer value: 5  The floating point value: 3.141593  The character value: 100  The floating point value: 1.618000  The character value: z  Frogram that will do the followings:  a) Declare a variable uninitialized b) Declare and initialize a variable in one statement c) Declare and initialize multiple variables with different values in one statement				
Sample input  Sample output  The integer value: 5 The floating point value: 3.141593 The character value: 100 The integer value: 1.618000 The floating point value: 2  The character value: 2  *  Program that will do the followings:  a) Declare a variable uninitialized b) Declare and initialize a variables with different values in one statement c) Declare and initialize multiple variables with different values in one statement			comment/ in C programming language?"	
Sample input  Sample output  The integer value: 5 The floating point value: 3.141593 The character value: 100 The integer value: 1.618000 The floating point value: 2  The character value: 2  *  Program that will do the followings:  a) Declare a variable uninitialized b) Declare and initialize a variables with different values in one statement c) Declare and initialize multiple variables with different values in one statement				
Sample input  Sample output  The integer value: 5 The floating point value: 3.141593 The character value: 100 The integer value: 1.618000 The floating point value: 2  The character value: 2  *  Program that will do the followings:  a) Declare a variable uninitialized b) Declare and initialize a variables with different values in one statement c) Declare and initialize multiple variables with different values in one statement	1	Drogram that will declare an integer a fleating	ag point number a character. Then it will	*
Sample input    Sample output	4.			
The integer value: 5 The floating point value: 3.141593 The character value: a The integer value: 100 The floating point value: 1.618000 The character value: z   *  Program that will do the followings:  a) Declare a variable uninitialized b) Declare and initialize a variable in one statement c) Declare and initialize multiple variables with different values in one statement		Threating them with values and print those ra		
The floating point value: 3.141593 The character value: a The integer value: 100 The floating point value: 1.618000 The character value: z   *  Program that will do the followings:  a) Declare a variable uninitialized b) Declare and initialize a variable in one statement c) Declare and initialize multiple variables with different values in one statement		Sample input	Sample output	
The character value: a The integer value: 100 The floating point value: 1.618000 The character value: z  The character value: 1.618000 The character value: z  * a) Declare a variable uninitialized b) Declare and initialize a variable in one statement c) Declare and initialize multiple variables with different values in one statement				
The integer value: 100 The floating point value: 1.618000 The character value: z  *  a) Declare a variable uninitialized b) Declare and initialize a variable in one statement c) Declare and initialize multiple variables with different values in one statement			· · · · · · · · · · · · · · · · · · ·	
The floating point value: 1.618000 The character value: z  *  *  Declare a variable uninitialized b) Declare and initialize a variable in one statement c) Declare and initialize multiple variables with different values in one statement				
The character value: z  Frogram that will do the followings:  a) Declare a variable uninitialized  b) Declare and initialize a variable in one statement  c) Declare and initialize multiple variables with different values in one statement			_	
5. Program that will do the followings:  a) Declare a variable uninitialized  b) Declare and initialize a variable in one statement  c) Declare and initialize multiple variables with different values in one statement				
a) Declare a variable uninitialized b) Declare and initialize a variable in one statement c) Declare and initialize multiple variables with different values in one statement			THE CHARACTER VALUE. 2	
a) Declare a variable uninitialized b) Declare and initialize a variable in one statement c) Declare and initialize multiple variables with different values in one statement				
b) Declare and initialize a variable in one statement c) Declare and initialize multiple variables with different values in one statement	5.	Program that will do the followings:		*
c) Declare and initialize multiple variables with different values in one statement		,		
		,		
TO DECIME AND INITIALIZE MUNICIPE VARIABLES WITH THE SAME VALUE IN ONE STATEMENT				
2, 200 and manage manage variables with the same value in one statement		u, Decidie and initialize multiple variable	es with the same value in one statement	

Documentation by Samiha Samrose, Lecturer, CSE Dept, UIU, Dhaka, Bangladesh.

6.	Program that will take your age in year(s) as input and print it.		*
	Sample input	Sample output	
	20	My age is: 20	
	21	My age is: 21	
7.	Program that will receive the values of an integer, a floating point number, a character from the keyboard and print those values.		*
	Sample input	Sample output	
	5	The integer value: 5	
	3.141593	The floating point value: 3.141593	
	A	The character value: a	
	100 1.618 z	The integer value: 100	
		The floating point value: 1.618000	
		The character value: z	
8.	Program that will take three integer numbers from keyboard but assign only the first a last inputs to variables and <u>skip</u> any assignment of the middle one.		**
	Sample input	Sample output	
	20 50 100	First Value = 20, Last Value = 100	
	33 75 22	First Value = 33, Last Value = 22	
9.	Program that will declare a variab initialize them with values and pri	ole from each data type: double, boolean. Then it will int them.	*
	Sample input	Sample output	
		The double value: 3.140000e+00 The boolean value: 1	
		The double value: 1.618039	
		The boolean value: 0	
		The boolean value. o	
10.	_	le from each data type: long int, long long int, long double,	**
	short int. Then it will initialize them with values and print them.		
	Sample input	Sample output	
		The long int value: 2147483647	
		The long long int value: 9223372036854775807	
		The long double value: 1.1E+4932	
		The short int value: 32767	

		The long int value: -2,147,483,648 The long long int value: -9223372036854775808 The long double value: 3.4E-4932 The short int value: -32768		
11.	Program that will declare a variable from each data type: unsigned int, unsigned long int, unsigned long long int, unsigned short int. Then it will initialize them with values and print them.			
	Sample input	Sample output		
		The unsigned int value: 4294967295		
		The unsigned long int value: 4294967295		
		The unsigned long long int value: 18446744073709551615		
		he unsigned short int value: 65,535		
		The unsigned int value: 0		
		The unsigned long int value: 0		
		The unsigned long long int value: 0 The unsigned short int value: 0		
	Program that will defin	ne a constant using "CONST" and print the value.	**	
12.	Frogram that will dem	ie a constant using CONST and print the value.		
	Sample input	Sample output		
		The value of pi: 3.14		
		The value of golden ratio: 1.62		
13.	<ul> <li>Program that will define a constant using "DEFINE" and print the value.</li> </ul>		**	
	Sample input	Sample output		
		The value of HEIGHT: 200		
		The value of PI: 3.14		
14.	_	ne a global and a local variable with the same name but with different	**	
	values, and then do the following steps <u>in order</u> -  A. Print the value of the variable before defining the local variable  B. Print the value of the variable after defining the local variable			
	C. Explicitly print the value of the variable as global			
	Sample input	Sample output		
		A. Global: 10		
		B. Local: 20		
		C. Global: 10		
15.	Program that will take	an floating point number as input from the keyboard and use <i>printf</i>	**	
13.	Frogram that will take	an hoading point number as input nom the keyboard and use printy		

function to perform the followings:

- (a) Print the number right justified within 10 columns
- (b) Print the number to be right justified to 2 columns (Assuming the input has more than 2 digits)
- (c) Print the number rounded to two decimal places
- (d) Print the number rounded to integer (without using conversion or type casting)
- (e) Prints the number in exponential notation/scientific notation

Sample input	Sample output
123.098	(a) Val: 123.098000
	(b) Val:123.098000
	(c) Val:123.10
	(d) Val:123
	(e) Val: 1.230980e+02
